Configure Platine for your context

Duration :1 day

This training course is delivered remotely, in synchronous mode, via a web conferencing system that supports video, audio, chat and screen sharing (trainee/trainer).

The aim of the training course is to teach you **how to configure a Platine instance to suit your needs**: the website's content, useful Platine features, the roles of user-designers, and automated content processings.

Price

€1,110 excluding VAT (€1,332 including VAT) for the training course.

Registration procedures and access period

Please contact us to arrange your session, either remotely or at your premises.

The lead time for organisation is approximately 1 month.

Prerequisites

Know how to use a publishing chain.

You use Scenari in client-server mode.

For whom ?

Taget audience : Authors.

This training course is aimed at Platine administrators responsible for **configuring a Platine platform**.

Objectives

At the end of the training course, participants will be able to:

- configure the Platine website part (user access, emails) and its structure (resource portal, training catalogue, etc.);
- build communities;
- define processing rules (rules governing access to the resource and its solutions, file formats, etc.): by default or variants for each document type;
- create role schemes (sets of editing rights) for user-designers.

Programme

1 — Fundamentals

- Exploring the front-office: (re)discovering the various possible configurations through examples: resource database, training catalogue, self-paced training without sessions, training with sessions and authenticated users, portal and training.
- Exploring the back-office: (re)discovering the various components: workspaces, depot, site, management;
- Getting started as a Platine scenarist: create one of the standard configurations following the step-by-step procedure provided for the exercise.

2 — Define the back-office role maps

- Understand the possible roles for user-designers;
- Define a role map and test it.

3 — Processings

- Explore possible processings (Parcours session, Parcours program, Opale module, Opale tutorial, Opale exerciser, SCORM package, web archive, simple file, PDF resource, image resource, audio resource, video resource, ODT resource).
- Create a processing and test it.
- Make changes to a processing, anticipate its impact on existing resources and verify its implementation.

Pedagogy and tools

Training principles

- The training is practice-oriented: the manipulation of the Scenari production environment through exercises;
- Terminology and concepts are introduced as the training progresses;
- The training is tailored to your needs, manipulations are done in an identical or very similar environment to your production environment.

Tools

- A Platinum instance, accessible on a server provided for the training duration,
- The web conferencing system (for remote training),
- Learning portal, which brings together administrative and teaching documents as well as questionnaires (assessment, satisfaction, evaluation).

Training materials

- Slideshow,
- Trainee booklet in PDF format.

The documents are made available to trainees at the start of the course.

Animation

A trainer can assist **a maximum of four trainees** during the training course.

Assessment

The skills acquired are assessed via an online questionnaire.
